

## EDUCATION

**DCT Academy**  
MERN Stack Trainee

**LNCTS (RGPV)**  
BE CE 2018

## SUMMARY

Hard-working individual, skilled in JS. Seeking a challenging role in the IT field so that I can expand my horizons and learn more. I did a course of Full Stack Web Development from DCT academy. I specialize in JavaScript language and can do front-end development as well as back-end development. I know how to work with libraries like React and Redux, and also with framework like Express. I also know how to work with NodeJS, MongoDB and Mongoose.

## SKILLS

**PROGRAMMING:** React, Redux, NodeJs, Express, MongoDB, Mongoose

**RELEVANT:** git, github, MVC Architecture, REST API, Linux, Problem Solver, Team Worker

## PROJECTS

### PET APPLICATION

[github.com/yashjais/Pet-Application](https://github.com/yashjais/Pet-Application)

Pet-Application is a full Stack MERN Application. It is a platform for pet lovers. It provides good opportunity for pet owners to search for people who can take their pets for walking/refreshment, and it also provides good opportunity for pet lovers to hang out with various awesome pets.

### TICKET MASTER

[github.com/yashjais/Ticket-Master](https://github.com/yashjais/Ticket-Master)

Ticket Master is an application which provides an interface through which a user can generate tickets. A ticket is generated when a customer have a complain about a certain service, then that ticket can be assigned to a employer based on the department and a priority can be given based on the urgency of the matter.

### NOTES APPLICATION

[github.com/yashjais/Notes-Application](https://github.com/yashjais/Notes-Application)

Easy-to-Use, fast, elegant and secure Notes Application. Made using React-Redux, this app lets you save the tasks and particular categories associated to it. The Back-End is made using Node-Express. And the database used is Mongo-Db. The designing tools used in this app are bootstrap and reactstrap.

### BLOG-UI

[github.com/yashjais/Blog-UI](https://github.com/yashjais/Blog-UI)

Blog-UI is a Front-End centric project. Made using React-Redux, it is fast and elegant. It is fetching data from the JSONPlaceholder site. Designing tools used in this project are Reactstrap and bootstrap.
