

## EDUCATION

**LNCTS(RGPV)** 2014 to 2018  
BE

**DCT Academy** 2019 to 2020  
MERN Stack Trainee

## SUMMARY

- Full Stack Web Developer responsible for end-to-end web application development, researching, designing, implementing, and maintaining software projects
- Passionate about building stuff from scratch and proficient in JavaScript
- I am determined to help clients and organizations find solutions and achieve their desired outcomes

## SKILLS

**TECHNICAL:** React, Redux, NodeJs, Express, NextJs, MongoDB, Mongoose, GraphQL

**RELEVANT:** git, github, MVC Architecture, REST API, Linux, Problem Solver, Team Worker

## EMPLOYMENT

### HYPERBEANS

Junior Software Engineer

June 2020 to Current

I have consulted and helped the organization by using modern JavaScript, agile methodologies, and continuous delivery. At Hyperbeans I have:

- Developed Projects in MERN Stack, also used NextJs, GraphQL, Relay, and Redux
- Touched areas like AWS, Docker, SEO
- Consulted for a tech company as they move to a SPA architecture
- Performed code reviews on Hyperbeans internal projects
- Developed web and mobile applications using React
- Worked with clients to better understand project requirements

## PROJECTS

### PEGGY

June 2020 to Current

Peggy is a Full Stack MERN Application, that is used to create, edit and delete campaigns. It is a tool that is also used for getting data insights and is built for the marketing team to analyze the performance of campaigns. My responsibilities include:

- Built components in React and wrote the respective APIs for them in NodeJs
- Worked on the logic of validations of campaigns which is primarily handled from the back-end
- Gathered the requirements from the marketing team and deliver the functionalities
- Added new Functionalities, Features, Bugs and resolving them, and keeping track of them via Jira
- Worked on the CloudFront caching

### ADMIN

June 2020 to Current

Admin app is used for creating, maintaining, and populating the articles which are written by the content team. This tool is used for publishing content on various products. My responsibilities include:

- Built components in React and wrote the respective APIs for them in NodeJs
- Worked on the functionalities like creating and editing navigation headers
- Fixed bugs and added new features

### TASKS

Dec. 2020 to Current

Tasks is an internal tool that is used for updating the database according to the needs. My responsibilities include:

- Wrote cron jobs that updated the data that is consumed in Peggy
- Wrote MongoDB queries for updating the Database
- Integrated all the tasks with Winston logs and Cloudwatch

### CHAT APP

Feb. 2021 to Current

Chat application is a full-stack MERN application that is developed using the Websocket for to and fro communication between client and server. My responsibilities include:

- Architected the full flow of the Application
- Solely created the models, backend, and frontend of this Application
- Hooked up the socket with node and created all the functionalities like chat, counter, group chat

## ACTIVITIES

Active on several coding and Knowledge exchange Platforms like HackerRank, HackerEarth, Leetcode, Stackoverflow, and Medium.
